Profile

AI automations and interfaces that make complex work clear. From process analysis and integrations to agents, internal tools and UI that make working with AI easy for teams.

I take AI all the way to a working product: local models with verified output, streaming and clear interface states, a human decision wherever a mistake is costly. Now a Senior Frontend Developer at Alem.AI Foundation, after 9 years of product frontend and design systems.

Skills

Frontend	**TypeScript, React,** Angular, RxJS, SCSS, BEM, Feature-Sliced Design, Vite, Astro, Electron
AI & Automation	**Ollama · local LLMs,** Qwen 2.5, vLLM, RAG, pgvector, bge-m3, JSON Schema, Faster-Whisper, Edge-TTS, Prompt engineering
Integrations	**Python · FastAPI, PostgreSQL,** Spring Boot, Kotlin, DuckDB, SQLite, WebSocket / SSE, JWT, REST
Tooling & Practices	Docker Compose, GitHub Actions, Git, Swift, Go, Lua, Figma, AI-assisted development

Experience

Senior Frontend Developer — Alem.AI Foundation

Aug 2026 — present

Product Development Office

- Frontend development

Frontend Developer — Kompra LLP

Mar 2017 — Jun 2026

Astana

- Built and maintained the design system: components, documentation, usage guidelines
- Frontend and mobile versions of kompra.kz and zakupki.kz
- Table-based HTML emails, corporate blog, landing pages

2017–2026, alongside the main job — frontend for third-party projects: zakup.sk.kz, e-shanyraq, equral, go-cargo, go-tender.

2003–2016 — director of the City-Advertising design studio (portals for Kyzylorda region agencies, a procurement platform for KazGerMunai JV), webmaster at the regional police department, Oracle DBA at Kazakhtelecom, system administrator.

Projects

OHK 2.0 — AI inside a closed network, where mistakes are costly
An offline Android and iOS app, a sync server, a web admin and an AI module on a local model — all inside the network.

AI UX: AI drafts, a human decides: only accepted or edited items reach the order; Quote check: a cited norm must match a knowledge-base fragment word for word; Answers strictly follow a JSON Schema; personal data is removed before the model.

A visit analysis on Apple M4 / 16 GB takes about 110 seconds, with grounds confirmed by quotes. Server and model install with a double-click on Windows and macOS.

`React · TypeScript · Kotlin Multiplatform · Spring Boot · PostgreSQL + pgvector · Ollama / vLLM`

Offline Sales Analytics — Sales analytics on a local LLM
Question → intent → SQL from Qwen 2.5 → validation → DuckDB → answer with a chart. Ships as an Electron desktop app.

AI UX: Answers streamed over WebSocket, SQL progress and cancellation; The generated SQL is shown in the answer; only SELECT and WITH run; Clarifying questions, answer rating and retry.

Data never leaves the user's machine. An EN↔RU column dictionary with 350+ entries. One-script install on macOS, Linux and Windows.

`React · TypeScript · FastAPI · DuckDB · Ollama · Electron · m3etis.is-a.dev/Offline-Sales-Analytics · github.com/M3etis/Offline-Sales-Analytics`

ClamKeep — Native macOS app
`Swift · AppKit · IOKit · m3etis.is-a.dev/ClamKeep · github.com/M3etis/ClamKeep`

WezTerm Pro Setup — A terminal environment in one click
`Lua · WezTerm · Shell · m3etis.is-a.dev/WezTerm-Pro-Setup · github.com/M3etis/WezTerm-Pro-Setup`

Education

Korkyt Ata Kyzylorda University, systems engineer, 2006

Languages: Russian — native, English — A2
